Growth-Oriented Development Suitability

- Very Low
- Low
- Moderate
- High
- Very High
- Protected Lands

0 5 10 20 30 40 Miles

Methodology: Development suitability was evaluated using four weighted criteria: road accessibility (35%), population density (30%), impervious-surface change (25%), and terrain slope (10%). Protected lands were excluded from the analysis. Suitability is classified into five categories, from Very Low to Very High.
